

# Simply WOS (Work Flow Management System) FEATURE SHEET

Simply WOS® Feature/Product	X = Standard O = Optional	Description
<b>Work Order Entry Module using link to existing Sales Order data</b>	<b>x</b>	Generate Shop Work Orders using minimal key strokes. All relevant Sales, Product and Work Order Details are auto-linked to simplify order entry. A useful feature that recalls all values used for a "Repeat Order" is built-in. The module is fully customizable to fit single and multi-pass processes (Presses, Laminators, etc...) used in your manufacturing operations and to incorporate your custom calculations to provide the Quantities necessary to satisfy the order. Order Release control, Product Family search engine and Hard copy Work order Print features are all included. "Order Merge" feature is also available to combine various orders that use the same processes to allow for reduction in set-up downtimes and increased efficiencies."UPDATE" Order feature allows changes to be made to existing Orders based on Customers changing needs
<b>Job/Machine Scheduler</b>	<b>x</b>	Schedule all different processes for a Job. Provide only the Start time and the Scheduler auto-computes the end time and the end date of the Job. Schedule "GAP Orders" to allow for Machine repairs, shop Holidays or Gaps required to satisfy your Customer delivery date. AUTO Schedule is a powerful feature that allows ALL orders within a period (start & end Dates) to be fully scheduled with a minimum preset time between Jobs. This feature is available for ALL processes and really makes scheduling many processes a breeze. AUTO schedules really speeds up Job scheduling and can provide substantial time savings. Job release control and Work Order print are also standard.
<b>Materials Requirement</b>	<b>o</b>	This module allows Purchasing to determine and track all materials required for Work Orders

# Simply WOS (Work Order Control & Scheduler) FEATURE SHEET

Simply WMS® Feature/Product	X = Standard O = Optional	Description
<b>Dashboard</b>	<b>x</b>	This module allows a view of all open and scheduled Work orders. A full current calendar month is graphically displayed and the user can click on any day on the screen to view the specific orders for that day. If the user wishes to select any period than the viewer also allows that. The viewer is calendar controlled but has a powerful drill-down capability which lets the user SEE any Job details by clicking the drill-down button. Machine capacity and loading data and reports are also included in the chalkboard making it a very popular Job Manager tool.
<b>Security</b>	<b>x</b>	Simply WOS Security modules provide several levels of security. There are levels associated with users to allow View only, Enter and View or Enter only. The Administrator can allow certain users specific features, levels of access for these features and also to password protect fields.
<b>Reports</b>	<b>x</b>	Several built-in reports such as Changed Work Orders, Work Orders not reviewed etc... are standard. Any Other custom Reports can be designed.
